

Participant instructions

SCI Agentathon 2026 · Tuesday, 26 May · KTH Library and Teknikringen 8

At a glance

Date Tuesday, 26 May 2026, 09:00 to 17:00.

Plenary venue Salongen, KTH Library (KTHB), Osquars backe 31.

Track rooms Salongen (Track A), Faxén in the Fluid Mechanics lab (Track B), Hållfasthetslära seminarierum (Track C). The latter two rooms are at Teknikringen 8.

Audience around 45 enrolled participants.

Organising team Artem Kulachenko (Track A lead), Marco Laudato (Track B lead), Wei Ouyang (Track C lead). Jonas Sellberg (Track A co-lead).

KTH Library (KTHB) opens to the public at 09:00. If you have a KTH card with library access, you can swipe into Salongen from 08:30.

1. The shared workspace

All track skeletons, sample data, prompts, and final deliverables live in one shared SharePoint and OneDrive folder. You edit directly in the folder, with no local clone needed. Open the link with your KTH account.

Agentathon 2026 workspace: [OneDrive link](#)

If you prefer git and your track lead has published a skeleton at <https://github.com/kth-sci/>, you may clone or fork from there instead, and sync results back to OneDrive at the end of the day.

Inside the workspace, you will find one subfolder per track. Each track folder contains:

- A short README that states the problem and files you may need if applicable.

Rules of the road

- Store the intermediate files in the OneDrive folder. This will help with collaboration, particularly when you reach usage quotas on some accounts and can resume on others.
- If you need a private scratch space, create a subfolder named scratch inside your sub-team folder. We will ignore those when collecting deliverables.
- Do not paste personal data or confidential data into prompts or into the files in the shared subfolders.

2. The three tracks

Each track explores a different family of agentic problems. You signed up for one of the three when you registered.

Track A: From the course syllabus to a working teaching assistant

Lead: Artem Kulachenko, Jonas Sellberg. **Room:** Salongen, KTH Library (KTHB).

Track B: Research and HPC workflow agents

Lead: Marco Laudato. **Room:** Faxén, Fluid Mechanics lab, Teknikringen 8.

Track C: Administrative and knowledge agents at KTH

Lead: Wei Ouyang. **Room:** Hållfasthetslära seminarierum, Teknikringen 8D.

3. Software setup

Step 1. Claude Desktop and Cowork mode (required)

Claude Desktop is the starting point. Cowork mode lives inside Claude Desktop and is where the Excel, PowerPoint, Word, and browser integrations become available.

1. Download and install Claude Desktop for your operating system from <https://claude.ai/download>
2. Open Claude Desktop and sign in with your Anthropic account. An active Claude Pro or Max subscription is required, since the free tier hits usage limits during the hands-on sessions. Claude is the preferred environment for the event; if you instead use ChatGPT, see Step 6.
3. Enable Cowork mode in Claude Desktop and restart Claude Desktop. On some machines, the integrations do not appear until the computer is restarted.
4. Once Cowork is active, open the connectors panel and install the integrations for Excel, PowerPoint, and Word. Grant access to each application the first time you use it.

Step 2. Claude Code (required)

Claude Code is the command-line agent that drives most of the live demo. It runs in any terminal.

5. Install Node.js LTS (version 20 or higher) from <https://nodejs.org> if you do not already have it.
6. In a terminal, run `npm install -g @anthropic-ai/claude-code`
7. Verify with `claude --version`. The command should print a version number.
8. Run `claude` and sign in with the same Anthropic account that you used in Claude Desktop.

Step 3. Superpowers skills (required)

Install the Superpowers skills bundle for Claude from <https://claude.com/plugins/superpowers>. Follow the install instructions on that page. We will use some of these skills during the day, particularly in Track A.

Step 4. Visual Studio Code or your usual IDE (optional)

Most participants will spend time reading and lightly editing code generated by the agent. Install Visual Studio Code from <https://code.visualstudio.com> if you do not already have a preferred editor; it pairs cleanly with Claude Code. If you already use VS Code or a JetBrains IDE, install the Claude Code IDE integration as well (the official VS Code extension or JetBrains plugin) so that you can drive Claude Code from inside the editor.

Step 5. Claude for Chrome (required)

The browser integration is delivered as a Chrome extension. It allows Claude to read web pages and to perform form-filling, navigation, and click-through tasks that are useful in every track.

9. Install Google Chrome if you do not already have it.
10. Install the **Claude for Chrome** extension from the Chrome Web Store.
11. Sign in with the same Anthropic account and grant the extension permission to operate in the tabs that you open during the agentathon. You can revoke access at any time from the extension menu.

Step 6. Codex (required if you do not have a Claude subscription)

At least one of Claude or Codex with a paid subscription is required. Claude is preferred. If you already use ChatGPT, Codex with an active ChatGPT subscription is an acceptable substitute. Codex is the OpenAI counterpart to Claude Code. Having both on your machine also makes the morning tools overview, where we compare them, more concrete, and lets you fall back to Codex during track work if a specific task fits it better.

12. In a terminal, run `npm install -g @openai/codex`, then `codex --version` to verify.
13. Run `codex` and sign in with your ChatGPT account.
14. If you prefer the desktop application, install it from <https://openai.com/codex>

Optional tools

The following tools are allowed but not required. Use them if you already use them; do not start learning them on the day of the event.

- Cursor, Gemini CLI, and Antigravity. Useful in Track B if you already have a workflow built around them.
- Git and a GitHub account remain useful if a sub-team wants to publish a deliverable as open source after the event, but they are not required during the event.

6. Data handling and code of conduct

- Do not enter personal data into any prompt.
- Do not paste API keys or passwords into any prompt or any file in the shared OneDrive folder.

7. Contacts

Track A: Artem Kulachenko, artem@kth.se

Track B: Marco Laudato, laudato@kth.se

Track C: Wei Ouyang, wei.ouyang@scilifelab.se.
